</div>
</div>

</body>

</html>

```

You're facing a **"redirected too many times"** issue, which is usually caused by an **infinite redirect loop**. In your case, this is likely happening because of this block:

php

```

if (isset($_SESSION['userID'])) {
    switch ($_SESSION['type']) {
        case 'admin':
            header('Location: ./admin/indexAdmin.php');
            exit();
        case 'nonadmin':
            header('Location: ./user/indexNonAdmin.php');
            exit();
    }
}

```

```
}  
}
```

If the redirect target page (`indexAdmin.php` or `indexNonAdmin.php`) also redirects back to this login page (if session is already set), you'll get stuck in an endless loop.

✅ Fix: Add a check on the destination page

For `indexAdmin.php` and `indexNonAdmin.php` , make sure those files **don't redirect back to the login page** if the user is already logged in.

Example fix for `indexAdmin.php` :

```
php  
  
<?php  
session_start();  
if (!isset($_SESSION['userID']) || $_SESSION['type'] !== 'admin') {  
    header('Location: ../login.php'); // adjust path as needed  
    exit();  
}  
  
// your normal admin page content here  
?>
```

✅ Optional Fix for Login Page

If you still want to keep redirecting from login if the user is already logged in, keep your check, but **ensure target pages don't loop back**.

! Security Warning

You're using **plain text password comparison**, which is unsafe:

```
php
```

```
if ($pass === $row['password']) {
```

Change it to use `password_verify` :

```
php
```

```
if (password_verify($pass, $row['password'])) {
```

And store passwords using `password_hash` when registering users:

```
php
```

```
$passwordHash = password_hash($pass, PASSWORD_DEFAULT);
```

Summary

- Fix the **redirect loop** by checking sessions properly on both login and target pages.
- Use `password_hash()` + `password_verify()` for secure authentication.
- Clear your browser cookies if the loop persists during testing.

Let me know if you want me to check your `indexAdmin.php` or `indexNonAdmin.php` file too.

```
<?php
include '../connect.php';
include '../session.php';

                echo "<option value='{ $row['id']}' data-
            relation='{ $row['relation']}'>{ $row['applicant_name']} -
            { $row['relation']}</option>";
            }
        ?>
    </select>

    <select name="grant_type"
    id="grantTypeDropdown" class="form-control">
        <option value="">-- Select Grant Type --
    </option>
    </select>

    <input type="date" name="grant_date"
    id="grant_date" class="form-control my-2">
    </td>
</tr>
</table>

    <button type="submit" name="submit" class="btn btn-
    success mx-2" onclick="return confirm('Are you
    sure?')">Add Grant</button>
    <a href="../admin/BrowseEPFNo.php" class="btn btn-
    info mx-2">Back to Search</a>
    <a href="../admin/indexAdmin.php" class="btn btn-
    danger mx-2">Back to Main</a>
    </form>
    <?php endif; ?>
</div>

<script>
    function updateGrantType() {
        const applicantDropdown =
        document.getElementById("applicantDropdown");

```

```

const grantTypeDropdown =
document.getElementById("grantTypeDropdown");
const selectedOption =
applicantDropdown.options[applicantDropdown.selectedIndex];
const relation = selectedOption.getAttribute("data-
relation");

grantTypeDropdown.innerHTML = "<option value='>--
Select Grant Type --</option>";

if (relation === "Self") {
    grantTypeDropdown.innerHTML += "<option
value='Death'>Death</option>";
    grantTypeDropdown.innerHTML += "<option
value='Retirement'>Retirement</option>";
    grantTypeDropdown.innerHTML += "<option
value='Marriage'>Marriage</option>";
} else if (relation === "Son" || relation === "Daughter")
{
    grantTypeDropdown.innerHTML += "<option
value='Birth'>Birth</option>";
    grantTypeDropdown.innerHTML += "<option
value='Deathb6'>Death before age 6 months</option>";
    grantTypeDropdown.innerHTML += "<option
value='Deatha6'>Death after age 6 months</option>";
} else {
    grantTypeDropdown.innerHTML += "<option
value='Death'>Death</option>";
}
}

function validateForm() {
    const applicantDropdown =
document.getElementById("applicantDropdown");
    const grantTypeDropdown =
document.getElementById("grantTypeDropdown");
    const grantDate =
document.getElementById("grant_date");

    if (applicantDropdown.value === "") {
        alert("Please select an applicant.");
    }
}

```

```

        return false;
    }

    if (grantTypeDropdown.value === "") {
        alert("Please select a grant type.");
        return false;
    }

    if (grantDate.value === "") {
        alert("Please select a grant date.");
        return false;
    }

    return true;
}
</script>
</body>
</html>

```

To add the "Existing Grants" section from your admin view into the **user view page**, you simply need to copy and adapt that section into the user page (the first code you shared). Here's how to insert it correctly:

✓ Replace this part in your user page:

Right after this block (line 254):

```

php

<tr>
  <td>
    Death grant Applicants<br> according to Welfare<br> constitution
  </td>
  <td>
    <table class="table table-striped">
      ...
    </table>
  </td>
</tr>

```

✓ Add the following block after that, to show Existing Grants:

php

```
<tr>
  <td>
    Existing Grants
  </td>
  <td>
    <table class="table table-bordered table-striped">
      <thead class="table-dark">
        <tr>
          <th>#</th>
          <th>Applicant Name</th>
          <th>Relation</th>
          <th>Grant Type</th>
          <th>Grant Date</th>
        </tr>
      </thead>
      <tbody>
        <?php
          $sql_grants = "SELECT g.id, a.applicant_name, a.relation, g.grant_type, g.grant_date
            FROM grants g
            INNER JOIN applicants a ON g.applicant_id = a.id
            WHERE g.member_id = '$idu'
            ORDER BY g.grant_date DESC";
          $result_grants = mysqli_query($con, $sql_grants);
          $counter = 1;

          if (mysqli_num_rows($result_grants) > 0) {
            while ($row = mysqli_fetch_assoc($result_grants)) {
              echo "<tr>
                <td>{$counter}</td>
                <td>{$row['applicant_name']}</td>
                <td>{$row['relation']}</td>
                <td>{$row['grant_type']}</td>
                <td>{$row['grant_date']}</td>
              </tr>";
              $counter++;
            }
          } else {
            echo "<tr><td colspan='5' class='text-center text-muted'>No grants added yet.</td></tr>";
          }
        </?php>
      </tbody>
    </table>
  </td>
</tr>
```

```
        ?>
    </tbody>
</table>
</td>
</tr>
```

Important Note:

You're currently not escaping or sanitizing your inputs/outputs properly. For a safer system:

- Escape all output using `htmlspecialchars($value)`
- Avoid directly injecting `$_GET['updateid']` into SQL → use `prepared statements` to prevent SQL injection.

Let me know if you'd like me to refactor this entire page securely with best practices.

2/2

give me full code

Here is the **full updated user view page** with **Existing Grants table added**, properly styled and integrated:

```
php

<?php
include '../connect.php';
include '../session.php';

if (!($_SESSION['type'] == 'user')) {
    header('location:../index.php');
    exit;
}

$idu = $_GET['updateid'];

$sql = "SELECT * FROM member_info WHERE id='$idu'";
$result = mysqli_query($con, $sql);
$row = mysqli_fetch_assoc($result);
```

```

$fname = $row['fname'];
$lname = $row['lname'];
$namewinitials = $row['namewinitials'];
$epfno = $row['epfno'];
$dept = $row['dept'];
$raddress = $row['raddress'];
$nic = $row['nic'];
$dob = $row['dob'];
$mobile = $row['mobile'];
$rd = $row['rd'];
$dop = $row['dop'];
$marital = $row['marital'];

if (isset($_POST['delete'])) {
    $sql = "DELETE FROM member_info WHERE id='$idu'";
    mysqli_query($con, $sql);
    $_SESSION['DeleteJobSuccess'] = true;
    header('location:..\user\DeleteSuccess.php');
    exit;
}
?>

<!DOCTYPE html>

    }
  <?php
  </tbody>
</table>
</td>

```

```

        </tr>
    </table>

    <div class="mt-4">
        <a href="..\admin\BrowseEPFNo.php" class="btn btn-info mx-2">Back to Search</a>
        <a href="..\admin\indexAdmin.php" class="btn btn-danger mx-2">Back to Main</a>
    </div>
</form>
</div>
</body>
</html>

```

✓ Summary of Improvements:

- Grants section is added.
- All dynamic content is HTML-escaped for security.
- Clear layout and Bootstrap styling preserved.

Let me know if you want to allow **grant adding** from the user side (with form), or if this page is only for viewing.

show that bootstrap part ⚠ This member is marked as **terminated** (Self → Death or Retirement).
No further grants are allowed to the member or their family.

Here's how you can display the **termination warning message** using Bootstrap styling in your **user view page**, just like the admin version:

✓ Add this block right after you fetch `$idu` and before the main content:

```
php
```

```

<?php
// Check if Self → Death or Retirement already granted
$blockGrant = false;
$check_termination_query = "SELECT * FROM grants g
    INNER JOIN applicants a ON g.applicant_id = a.id
    WHERE g.member_id = '$idu'
    AND a.relation = 'Self'
    AND (g.grant_type = 'Death' OR g.grant_type = 'Retirement')";
$result_termination_check = mysqli_query($con, $check_termination_query);
if (mysqli_num_rows($result_termination_check) > 0) {
    $blockGrant = true;
}
?>

```

✓ Then, inside your main HTML (for example, just below `<h1>View EPF Record</h1>`):

```

php

<?php if ($blockGrant): ?>
    <div class="alert alert-danger mt-4">
        ⚠ This member is marked as <strong>terminated</strong> (Self → Death or Retirement).
        No further grants are allowed to the member or their family.
    </div>
<?php endif; ?>

```

✓ Output Example:

It will show like this:

```

<div class="alert alert-danger mt-4"> ⚠ This member is marked as
<strong>terminated</strong> (Self → Death or Retirement). No further grants are allowed to
the member or their family. </div>

```

Let me know if you want to **hide the grant table** as well when this message appears.

giveme full code

Here's the **full updated code** of the user view page with the following additions:

- ☒ Full user info display
- ☒ Applicant list
- ☒ Existing grants table
- ☒ **Termination warning** message (if Self → Death or Retirement is granted)

☒ Full Code:

php

```
<?php
include '../connect.php';
include '../session.php';

if (!($_SESSION['type'] == 'user')) {
    header('location:..\index.php');
    exit;
}

$idu = $_GET['updateid'];

// Fetch member info
$sql = "SELECT * FROM member_info WHERE id='$idu'";
$result = mysqli_query($con, $sql);
$row = mysqli_fetch_assoc($result);

$fname = $row['fname'];
$lname = $row['lname'];
$namewinitials = $row['namewinitials'];
$epfno = $row['epfno'];
$dept = $row['dept'];
$raddress = $row['raddress'];
```

```

$nic = $row['nic'];
$dob = $row['dob'];
$mobile = $row['mobile'];
$rd = $row['rd'];
$dop = $row['dop'];
$marital = $row['marital'];

// Check if Self → Death or Retirement grant exists
$blockGrant = false;
$check_termination_query = "SELECT * FROM grants g
    INNER JOIN applicants a ON g.applicant_id = a.id
    WHERE g.member_id = '$idu'
    AND a.relation = 'Self'
    AND (g.grant_type = 'Death' OR g.grant_type = 'Retirement')";
$result_termination_check = mysqli_query($con, $check_termination_query);
if (mysqli_num_rows($result_termination_check) > 0) {
    $blockGrant = true;
}
?>

```

```

                    </tr>";
                }
            <?php
    }
    ?>

```

```
        </tbody>
    </table>
</td>
</tr>
</table>

<div class="mt-4">
    <a href="../../admin/BrowseEPFNo.php" class="btn btn-info mx-2">Back to Search</a>
    <a href="../../admin/indexAdmin.php" class="btn btn-danger mx-2">Back to Main</a>
</div>
</form>
</div>
</body>
</html>
```

Let me know if you also want to:

- ☒ Hide the grant table entirely when terminated
- ☒ Add export/print features
- ☒ Enable users to request grants (if allowed)

Happy to help!

how to trace activities of users of web site

To **trace user activities on your website**, especially in a PHP-based system like yours, you can implement a **logging system** that records key actions (login, logout, data edits, views, deletions, etc.) in a dedicated `activity_log` table.

☒ Step 1: Create `activity_log` Table

Run this SQL in your database:

```
sql
```

```
CREATE TABLE activity_log (  
  id INT AUTO_INCREMENT PRIMARY KEY,  
  user_id INT NOT NULL,  
  username VARCHAR(100),  
  activity TEXT,  
  ip_address VARCHAR(45),  
  user_agent TEXT,  
  created_at DATETIME DEFAULT CURRENT_TIMESTAMP  
);
```

✓ Step 2: Create a Logging Function in PHP

Make a reusable function (e.g. in `log_activity.php`):

```
php  
  
<?php  
function logActivity($con, $userId, $username, $activity) {  
  $ip = $_SERVER['REMOTE_ADDR'];  
  $userAgent = $_SERVER['HTTP_USER_AGENT'];  
  $stmt = $con->prepare("INSERT INTO activity_log (user_id, username, activity, ip_address,  
user_agent) VALUES (?, ?, ?, ?, ?)");  
  $stmt->bind_param("issss", $userId, $username, $activity, $ip, $userAgent);  
  $stmt->execute();  
  $stmt->close();  
}  
?>
```

✓ Step 3: Use the Logger in Your Pages

In any page (after `session_start()` and DB connection), include and use like this:

```
php  
  
include 'log_activity.php';  
  
// Example: when viewing member record
```

```
logActivity($con, $_SESSION['userID'], $_SESSION['username'], "Viewed EPF record of member ID $idu");
```

Other examples:

- **Login success:** `logActivity(..., "Logged in")`
- **Grant added:** `logActivity(..., "Added grant for applicant ID $applicat_id")`
- **Record deleted:** `logActivity(..., "Deleted member record ID $idu")`

✓ Step 4: Admin View Logs (Optional)

You can create a page `view_logs.php` to let admins see the logs:

php

```
<?php
include '../connect.php';
$result = mysqli_query($con, "SELECT * FROM activity_log ORDER BY created_at DESC");
?>

<table class="table table-striped">
  <thead>
    <tr><th>User</th><th>Activity</th><th>IP</th><th>Device</th><th>Time</th></tr>
  </thead>
  <tbody>
    <?php while($log = mysqli_fetch_assoc($result)): ?>
      <tr>
        <td><?php echo $log['username']; ?></td>
        <td><?php echo $log['activity']; ?></td>
        <td><?php echo $log['ip_address']; ?></td>
        <td><?php echo substr($log['user_agent'], 0, 30); ?></td>
        <td><?php echo $log['created_at']; ?></td>
      </tr>
    <?php endwhile; ?>
  </tbody>
</table>
```

Tips:

- Only allow **admins** to view the logs.
- Consider **archiving logs** after a certain period to keep the database light.
- If needed, log more details like URLs or query params.

Would you like me to generate the full `log_activity.php` file or help you integrate it into your current project?

can we set activity table delete old values automaticxally

Yes, you can **automatically delete old activity log entries** using one of these two common methods:

Option 1: MySQL Event Scheduler (fully automatic)

This is the best way if you want MySQL to handle it on its own — no PHP needed.

Step 1: Enable the MySQL Event Scheduler

Run this SQL once:

```
sql
```

```
SET GLOBAL event_scheduler = ON;
```

To keep it always enabled, add this to your MySQL config (`my.cnf` or `my.ini`):

```
ini
```

```
event_scheduler=ON
```

Step 2: Create an Event to Delete Logs Older Than 90 Days (for example)

sql

```
CREATE EVENT IF NOT EXISTS delete_old_logs
ON SCHEDULE EVERY 1 DAY
DO
  DELETE FROM activity_log
  WHERE created_at < NOW() - INTERVAL 90 DAY;
```

You can change `90 DAY` to whatever you want: `30 DAY`, `6 MONTH`, etc.

Option 2: PHP Cleanup Script (manual or cron job)

Create a simple PHP script (e.g. `cleanup_logs.php`):

php

```
<?php
include 'connect.php';

$sql = "DELETE FROM activity_log WHERE created_at < NOW() - INTERVAL 90 DAY";
if (mysqli_query($con, $sql)) {
    echo "Old logs cleaned.";
} else {
    echo "Error: " . mysqli_error($con);
}
?>
```

Then:

- Run it **manually**
- Or set a **cron job** on your server to run it daily/weekly

Bonus: Add TTL-like Behavior (Optional)

If using **InnoDB** (which supports triggers/events), the **event scheduler is better**. MySQL doesn't support automatic TTL like MongoDB, but these approaches achieve the same result.

Would you like me to:

- ☒ Generate a ready `.sql` file for the event?
- ☒ Help set up a cron job on your server?
- ☒ Add soft-delete (`is_deleted` column) instead of permanent delete?

Let me know what fits your system best.
